IvedaMobile

"Turn your smartphone and tablet into mobile, cloud video streaming device"

IvedaMobile is a centralized video hosting service through the cloud using smartphones and tablets. You can quickly transform your smartphone or tablet into a video and audio transmitter, hosted on our cloud and broadcasted to multiple simultaneous users for both live and recorded audio and video access.

Deployment is easy. With IvedaMobile, you can also use your smartphone and tablet to capture live events and record for instant sharing. After signing up for service, simply download the free app to your phone or tablet, enter your username and password, and begin live mobile streaming. To view your hosted video, simply log in to the Iveda Solutions hosting website using Microsoft Internet Explorer™ (version 8.0 and above). Live video can also be shared by downloading the IvedaMobile Viewer app on iOS devices and supported Android devices.

What Sets IvedaMobile Apart from Other Smartphone Video Apps?

- Broadcasts video to multiple users through a web interface or IvedaMobile Viewer app
- The only true cloud backend. Redundant, robust, enterprise-class infrastructure
- Most advanced wireless streaming technology for smoother video
- Proprietary compression technology; more efficient and secure
- No equipment or software to buy and maintain
- Flexible and scalable from one to thousands of hosted smartphones
- Cloud hosting and storage
- Video and audio recording in the cloud
- Low latency (~ 3 seconds) in 3G network

- Multiple smartphones, multiple views on a webpage
- Multiple simultaneous users
- Live view and instant access to video & audio recording
- Cloud-based storage

U.S. DEPARTMENT OF HOMELAND SECURITY
DESIGNATED
SAFETY ACT
